PROFESSIONAL SUMMARY

Results-driven.NET Backend Developer with strong experience in designing and developing secure, scalable RESTful APIs using ASP.NET Core. Skilled in C#, Entity Framework Core, SQL Server, Clean Architecture, Repository Pattern, LINQ, JWT Authentication, and SignalR for real-time applications. Passionate about building reliable backend solutions, optimizing database performance, and delivering clean, maintainable code while continuously expanding technical expertise.

EDUCATION

Beni Suef University 09/2023 – 05/2027 | Beni Suef, Egypt
Bachelor of Computer Science and Information Technology
(Expected)

PROJECTS

Mazak | AI-Powered Coffee Products Online store , *(Freelance project) Fullstack Development*
ASP.NET Core MVC | C# | Entity Framework Core | SQL Server | ASP.NET Identity | Google OAuth | Groq AI | Bootstrap | AJAX

- Developed a modern coffee products showcase web application using ASP.NET Core MVC and Entity Framework Core.
- Integrated an AI Assistant using Groq API (Llama 3.1) to help users discover products and answer product-related questions.
- Implemented Google OAuth Authentication alongside ASP.NET Core Identity for secure and seamless user authentication.
- Built user features including registration, login, profile management, password change, and favorites management.
- Designed responsive product browsing, category filtering, and detailed product pages.
- Improved user experience using AJAX for asynchronous interactions without full-page reloads.
- Deployed the application on MonsterASP.NET with SQL Server database integration.

Car Rental System API , *Backend Development*
C#| ASP.NET Core Web API| Entity Framework Core| SQL Server| LINQ| Clean Architecture| Layered Architecture| Repository Pattern| ASP.NET Core Identity| JWT Authentication & Role-Based Authorization | SignalR | Redis Distributed Caching| Stripe Payment Integration

- Implemented secure authentication and password recovery using OTP verification, expiration policies, and single-use reset tokens.
- Integrated Redis distributed caching to reduce repetitive database queries and improve API response performance, with cache expiration and invalidation strategies.
- Integrated Stripe payment processing with payment status management and secure webhook verification.
- Developed a reusable car image service to manage image uploads and store image URLs separately from business logic.

- Implemented multi-role authorization using ASP.NET Core Identity for SuperAdmin, Admin, CarOwner, Employee, Customer, and Driver roles.
- Built real-time messaging and notification functionality using SignalR, enabling instant communication without continuous polling.
- Applied Clean and Layered Architecture to separate API endpoints, application logic, domain entities, and infrastructure concerns, improving maintainability and scalability.

E-Commerce Platform API , *Backend Development*
ASP.NET Core 9 Web API | C# | SQL Server | Clean Architecture | LINQ | EF Core | JWT | SignalR
- Built a scalable ASP.NET Core Web API (.NET 9) using Clean Architecture with separate API, Application, Domain, Infrastructure, and Test layers.
- Implemented secure JWT Authentication & Authorization with ASP.NET Core Identity and Role-Based Access Control for Admin and User roles.
- Developed Product, Category, Wishlist, Shopping Cart, Address, and Order Management RESTful APIs.
- Implemented a real-time Notification System using SignalR, enabling instant client-side notifications for events such as order creation and status updates.
- Used Entity Framework Core, SQL Server, LINQ, Repository Pattern, Dependency Injection, DTOs, and AutoMapper to build maintainable and decoupled backend services.
- Designed notification APIs for retrieving notifications, marking notifications as read, marking all notifications as read, and retrieving unread notification counts.
- Documented and tested RESTful APIs using Swagger/OpenAPI and applied xUnit unit testing practices.

Aqarak – Real Estate Web API , *Backend Development*
ASP.NET Core 9 Web API | SQL Server | C# | Repository Pattern | LINQ | EF Core | JWT | SignalR
- Developed a scalable RESTful Real Estate API using ASP.NET Core Web API, following Clean Architecture and Repository Pattern principles.
- Implemented secure JWT Authentication & Authorization, including user registration and login workflows.
- Built complete CRUD operations for property management, with support for multiple image uploads and efficient file storage.
- Designed and implemented a Favorites system, allowing users to save, manage, and retrieve their preferred properties.
- Developed a real-time one-to-one messaging system using SignalR, supporting conversations and instant message delivery between users.
- Structured data exchange using DTOs and managed persistence with Entity Framework Core and SQL Server, maintaining a clean separation between API, business logic, and data access layers.

TECHNICAL SKILLS

Backend Development (C#, ASP.NET MVC, ASP.NET Core Web API, SignalR, LINQ, Entity Framework Core, SQL Server) | **Architecture & Patterns** (Clean Architecture, Repository Pattern) | **Frontend** (HTML5, CSS3, Bootstrap 5, JavaScript) | **Tools** (Git, GitHub, Postman, Swagger, Visual Studio)

LANGUAGES

Arabic (Native) | **English** (Good)
